

Analog “Things” connected to the Internet provide us with unprecedented benefits, but also present significant challenges. The rapid vast proliferation of connected devices -- the Internet of things -- poses a challenge to enterprise IT and operations technology. Cybersecurity 101 says you cannot protect what you do not know you have, and existing security solutions are not designed for IoT environments.

We designed Senrio Insight to give you the awareness and insight necessary to understand how IoT impacts your business. Senrio lays out a blueprint of all the networked devices in your IT environment to reduce the risks associated with the proliferation of IoT devices, and enable you to more effectively detect and combat threats that take advantage of IoT devices.

Why Choose Senrio Insight?

EASILY INTEGRATE

Enhance your security investment by harmoniously integrating your existing security solutions with our API. Ingest enriched data via multiple data export formats, and SIEM integrations. Use alerts to create firewall rules and IDS signatures.

ZERO IMPACT DEPLOYMENT

Be up and running in minutes. No appliances, no agents, means no burden on end-points or your network.

PURPOSE-BUILT FOR IOT

The PC security model doesn't translate to IoT devices, especially devices that interface with people. Senrio Insight is designed specifically for the challenges of an IoT-rich environment.

PRIVATE & SECURE

No Deep Packet Inspection (DPI) keeps you compliant with privacy regulations and invisible to attackers.

What Senrio Insight Does

SEES EVERYTHING

Identify and profile all the devices on your network, what they are doing, and who they talk to.

UNCOVERS UNUSUAL BEHAVIOR

Build trust with devices by understanding both typical and atypical device patterns and behaviors with Senrio self-learning technology.

GIVES REAL-TIME ALERTS & RECOMMENDATIONS

Automatic alerts triggered when devices deviate from the standard operation, to kick off your business-specific safety protocols

PROVIDES CONTEXT-RICH ANALYSIS

Enhance your security investment by harmoniously integrating your existing security solutions with our API. Ingest enriched data via multiple data export formats, and SIEM integrations. Use alerts to create firewall rules and IDS signatures

FEATURED PRESS

What to Look for in an IoT Security Solution

IoT is becoming pervasive in enterprises of all types, and the threats to and via IoT devices to enterprise security is growing. Choosing a solution to address these issues requires careful consideration of a number of factors:

ASSET AWARENESS

Standard asset discovery and management solutions do not always identify IoT devices, which could leave you with a vulnerable blind-spot.

SCALABILITY

Every packet generated by an IoT device has potential value, which makes the ability to scale economically a critical requirement.

DOMAIN RESPECT

PC-centric security approaches fail badly in IoT-rich environments. No solution should impose a security regime on you that puts operations or people at risk.

BEHAVIOR PROFILING

An effective solution will have the intelligence to understand the context in which a given device operates, and alert when its risk profile changes.

EXTENSIBILITY

Choose integrations that enhance your previous IT investments and are vendor approved. Truly extensible solutions have APIs and export data to your existing tools.

CREDIBILITY

IoT security research should be the foundation upon which any solution is developed. IoT should be in the team's DNA.

Security for IoT Devices

by the pioneers in IoT device research

Senrio is an enterprise IoT cybersecurity platform, providing the visibility, analytics, and actionable insights for networked embedded devices (a.k.a. The Internet of Things, or "IoT"). Using patent-pending technology based on a decade of IoT research, Senrio can uniquely identify unusual behavior in a network environment without impacting network traffic or endpoints. Senrio's products help give operators who run IoT-rich environments insights into all their devices. Hospitals, ICS, and SCADA systems choose Senrio to secure their Internet of Things devices.
